HAVE HAVE YOU COVERE REXTM SynFelt is a high strength 50% in labor and time expense, counting surface a slip resistance

REX™ SynFelt

REXTM *SynFelt* is a high strength woven synthetic roof underlayment that can save you 50% in labor and time expense, compared to 30# felt.

- Slip resistant walking surface AND back surface additional grip with two sided slip resistance
- 20 times stronger than asphaltic felt won't tear off, buckle or curl when wet
- UV resistant and can be left exposed for up to 6 months
- Limited lifetime warranty exceeds the needs of any final roof covering
- Pre-printed nailing pattern and overlap lines speeds installation

REXTM SynFelt

PRODUCT SPECIFICATIONS			TEST METHOD
Roll Width		48 in.	
Weight Per Square		2.8 lbs.	
Warranty		Lifetime	
Water Transmission		Pass	ASTM D-4869
Tensile Strength	MD	96 lbs.	ASTM D-5034
	CD	116 lbs.	
Breaking Strength	MD	30 lbs.	ASTM D-5034
	CD	28 lbs.	
Pliability		Pass	ASTM D-226
Water Ponding		Pass	ASTM D-779

ROLL SIZE (ROLLS PER PALLET)

48 in. x 250 ft. (35)

48 in. x 125 ft. (54)

REX™ SYNFELT INSTALLATION

- 1. Please ensure the roof deck is clean, smooth, and dry prior to beginning installation.
- 2. REXTM SynFelt is laid out horizontally (parallel) to the eave with the printed side up, with 3" (76 mm) horizontal laps and 6" (152 mm) vertical laps. On roof slopes less than 4:12, REX™ Syn-Felt should be lapped at 24" (61 cm) or to center line as printed, over the underlying course.
- 3. REXTM SynFelt should be attached to the roof using plastic cap roofing nails or staples having a 1" (25 mm) diameter plastic cap, 3/8" diameter EG smooth shank roofing nails, 12 gauge corrosion resistant ring shank fastener having a 1" diameter corrosion resistant round cap or tin tag. Spacing should be at 8" (20 cm) on center at both horizontal and vertical caps for normal wind zones. In high wind zones and coastal areas, REX[™] SynFelt should be fastened at 4" (101 mm) at both horizontal and vertical laps. In all cases fasten at 24" (61 cm) on center along the center of the roll in the field of the roof. The pre-printed nail pattern spacing described above applies to normal as well as high wind conditions.
- 4. The use of staples to attach REX™ SynFelt is permitted only when the final roof covering is to be installed immediately afterward. Pneumatic staple guns are not recommended.
- 5. Where seams and joints require the use of sealant or adhesives, use a high quality, low solvent, asbestos free, plastic roofing cement meeting ASTM D-4586 Type 1, Federal Spec SS-153 Type 1 and consult manufacturer's installation instructions.
- 6. Depending on roof pitch and surface conditions, it is recommended that roof jacks, toe-boards or a storage platform be secured to support roofing materials placed on roof.
- 7. REX™ SynFelt is not designed for indefinite outdoor exposure, and it is recommended that installation of the final roof covering take place within 6 months.
- 8. As with any roofing product, always be careful to observe safe roofing codes and practices as by OSHA Standard – 29 CFR Fall Protection Systems Criteria and Practices – 1926.502.
